Market Tracking System RFI

Response Submission by:

ENXSuite (*formerly Carbonetworks Corp*)
1700 Montgomery St., Suite 209
San Francisco, CA 94111

On behalf of ENXSuite (formerly Carbonetworks), we thank you for the opportunity to participate in this RFI.

ENXSuite is uniquely qualified to support CARB's requirements. We provide a robust and easy-to-use carbon management system that has also been tailored for local governments engaged in policy planning, implementation, and collaboration. For example, we serve the Province of British Columbia as a client, who is currently utilizing our system to manage climate change policies to reduce carbon emissions and to participate in various cap-and-trade markets. Our system for the BC Government supports uniquely built software functionality customized to meet the government's climate change policies as well as cap-and-trade functionality to support the Western Climate Initiative (WCI). Another major local government client is the City of Chicago, where ENXSuite powers their carbon, energy, and environmental management system that captures and manages information from the City's internal operations, local businesses, and households – all collaborating in carbon reduction, cap-and-trade, and other sustainability initiatives.

Besides leading technology, we have some of the world's leading experts in carbon and environmental management on staff and within our board of advisors, such as Dr. Ines Sousa, our Director of Sustainability Solutions, who holds a Ph.D in Environmental Engineering from M.I.T. Our client advisors include members of the Western Climate Initiative and experts that set policy for the Province of British Columbia. These experts complement our technology to offer our clients thought leadership in designing and deploying world-class solutions.

Indeed, our track record of serving these large local government clients, as well as Fortune 500 companies, reflect the domain expertise, robustness, scalability, and security of our systems. As one of the pioneers of carbon, energy, and environmental systems, ENXSuite's platform reflects over 10 years of technology R&D. Headquartered in San Francisco, we are a business chartered within the State of California and can provide dedicated support from our resources, only hours away from Sacramento.

Additional Company Information:

- **Company Incorporated:** 2005
